**Assessment in Estonia, Municipal kindergartens MLA Viimsi Lasteaiad  
Haabneeme, 20.04.2021**

We assess the internship according to requirements of sending institution. In our institution everyday activities are based on curricula, also on periodic plans of kindergarten and each group. Students hosted by our institution should adapt to group`s daily activities. During the practice period we integrate the student into pedagogical activities of the group and the whole kindergarten.

For student assessment the most common methods are observation, group /individual discussions, involvement into planning pedagogical activities and analyzing planning/ bringing activities to life. We are opened to use different assessment methods and communication platforms.

In case of international internship the language barrier might cause some difficulties in communication and involvement into kindergarten activities. That aspect might influence the achievement of aims of practice period and assessment process.
